

Use a soft sponge or cloth to absorb standing water and to remove water spots. Clean up spills immediately. Counter tops that do not have raised edges to keep water off the cabinets, will require more attention to cabinetry maintenance.

To maintain and protect the top's finish, always use a soft cotton cloth. We recommend Gel-Gloss[®] to protect and clean cultured marble, onyx, and granite counter tops.

With a little bit of care, your vanity top will last for many years!
