

**IMPORTANT:**

Water Damage is not covered by our warranty.

Vanity Cabinets

The Danger of Moisture: Protect against moisture and steam with good bathroom ventilation. Lacquer makes the wood surface water resistant, NOT **WATERPROOF**. To remove water, dab and absorb, rather than wipe. Consistently rubbing to remove water will cause the finish to rub off, little by little, exposing the raw wood. Be aware of water spilling down the cabinet. Other vanity top manufacturer's counter tops that do not have raised edges to keep the water off the cabinets will need more attention and maintenance.

How to Care for your Wooden Vanity: Use an aerosol furniture polish with a soft cotton/flannel dust cloth to clean your wooden vanity.

How to Care for your White Thermofoil Vanity: Use a damp soft cotten cloth or sponge with mild soapy water, or general all purpose cleaners without amonia.

Do Not Use: Strong solvent based cleaners, paint thinners, mineral spirits, etc., or any waxes or polishes that contain silicone amonia or any product that contains amonia.

Drawer Removal Tip: Should you need to remove the drawers, number each one so they will go back into the same opening. Each drawer box and drawer front is specific to their respective locations.

Vanity Tops

How to Care for your Gloss Vanity Top: Use a soft sponge or cloth to absorb standing water and to wipe up water spots. To maintain and protect the gloss finish we suggest periodically applying a cleaner and restorer product like Gel Gloss®.

How to Care for your Satin Vanity Top: Use a soft sponge or cloth to absorb standing water and to wipe up water spots. To prevent the satin finish from buffing to a sheen, it is best to avoid polishes, pastes, restorer products etc., instead, a soft damp cloth and if necessary, a mild soft-soap, will clean the top. Follow it up with a clean, soft cloth to dry it off with. Avoid over-rubbing areas for a prolonged time and excessive pressure, as this can produce friction/heat and may buff the area to a glossier sheen than surrounding areas.

Do Not Use: Harsh, abrasive cleaners or brushes on cultured vanity tops as these will scratch and mar the finish. Avoid direct heat sources and keep paint thinners, mineral spirits etc., away as they will damage the gel-coat.
